Kliniczny Szpital Psychiatryczny
SPZOZ w Rybniku

M2MMed

About the Research partnership

The collaboration between M2M Med and the Clinical Psychiatric Hospital SPZOZ in Rybnik creates a comprehensive platform for conducting modern clinical research in psychiatry and dementia-related disorders. This partnership combines M2M Med's experience as an independent clinical research site with the infrastructure, patient base, and medical expertise of the largest psychiatric center in the Silesia region. Together, we ensure the highest standards of patient safety, data quality, and operational efficiency in the conduct of psychiatric clinical trials.

Key success factors of collaboration

- Established legal framework: master cooperation agreement (06/2024) and detailed SOP-driven project procedures fully aligned with ICH-GCP.
- Full insurance coverage: both primary and excess liability policies for all study operations.
- M2M MED. clinical research experience and scale: 7 years in commercial clinical research, 25 Principal Investigators across 15 specialties, and a team of experienced Study Coordinators.
- Quality and compliance: active membership in SCRS – Society for Clinical Research Sites and GCP.pl.
- Robust infrastructure: 26 consulting rooms, 27 procedure rooms, 141 patient wards, and a full diagnostic suite (RTG, CT, ECG, EEG, USG, laboratory).
- Extensive hospital patient database: over 73,000 medical records (as of Feb 2025) and \approx 2,600 hospitalizations annually.

Site Profile – Clinical Psychiatric Hospital in Rybnik

The largest psychiatric institution in southern Poland. Comprising: Emergency Department, Mental Health Centre, General Psychiatry Wards, Forensic Psychiatry, Addiction Therapy Units (in-patient and day-care), Psychiatric Rehabilitation Ward, and Nursing Care Unit. Awards: 'Modernity Laurel 2025' and the National Quality in Healthcare Award.

Clinical Focus and Patient Database

The joint center maintains one of the largest and best-characterized psychiatric patient populations in the region, enabling rapid, well-targeted recruitment in key psychiatric and neurocognitive indications. Data are derived from ICD-10 coded records (as of 2025).
